CUSTOMER SUPPLY AGREEMENT

Framework terms for product access, orders, delivery, quality, payment, and per-product warranty.

AGREEMENT REF. [ASSIGN UPON ISSUE]

This agreement records the parties' general buying and supply terms. Each Sales Order confirms its own items, quantities, price, delivery date, order-level payment terms, and any required downpayment. Product-level specifications and warranty coverage are shown in the schedules and order documents referenced below.

ORDERING AND COMMERCIAL TERMS

Order-level terms keep item quantities, price, payment, and delivery together on each order.

1. Scope and authorized products

The customer may request only products authorized for its account. The current customer-record catalog access is summarized here. A requested item is not accepted until the supplier confirms it in a Sales Order.

Products currently authorized for this customer

[MAP THIS FIELD]

The agreement does not reserve inventory. Availability and production capacity are confirmed for each order.

2. Sales Orders and product specifications

The customer submits a purchase order or portal request. The supplier reviews product eligibility, quantity, current stock, manufacturing capacity, requested delivery date, and any customization before accepting. A Sales Order is binding only after the supplier confirms it in writing or through the portal.

For every accepted order, the Sales Order records the part number, quantity, unit price, applicable taxes, total, delivery date, and order-level payment terms. Product schedules may set a minimum and maximum quantity per order line; all requested quantities remain subject to confirmed stock and production capacity.

Customized products require an approved blueprint or technical drawing that identifies material, dimensions, revision, tolerances, and acceptance criteria. The approved order documents control those details; a general catalog description alone is not a manufacturing specification.

Order-level detail	Recorded on the accepted Sales Order
Quantity and unit price	Confirmed for each order; subject to stock and capacity
Per-product order limits	Record the minimum and maximum quantity for each authorized product and order line
Dimensions and materials	Attach the approved product specification or drawing
Custom configuration	Attach the signed-off blueprint and revision number

3. Payment, proof, and downpayment

The payment term below is the customer’s default for a new order. The accepted Sales Order may confirm or override it for that order total; it never applies to only one line item unless the order expressly says so. Payment is due against the verified invoice and the due date recorded for that order.

Customer default payment terms

Payment methods accepted under this agreement

[MAP THIS FIELD]

Freight paid by

[MAP THIS FIELD]

When bank transfer is selected, the customer submits the transfer reference or payment proof through the portal. Payment is treated as received after the supplier verifies settlement. A downpayment is optional and applies only when its amount and due date are stated on the accepted Sales Order.

DELIVERY, QUALITY AND WARRANTY

Warranty options belong to a customer and product pair. The terms below are summarized from the customer record and should match the approved agreement schedule.

4. Delivery and receiving

The saved receiving address and map pin identify the intended delivery point. Before dispatch, the supplier confirms the delivery window, route, vehicle capacity, driver availability, and any site-access requirements. Driver identity, credentials, plate number, vehicle, and load weight are recorded on the shipment record.

The customer provides a receiving contact and safe unloading access. The receiving representative records shortages or visible transport damage on the delivery record and attaches supporting photographs when applicable.

5. Product-specific warranty choices

The warranty summary is maintained per product and may offer more than one choice. The applicable choice is selected and saved on each Sales Order. No product inherits another product’s warranty. If a product has no configured warranty choice, coverage must be agreed in writing before order acceptance.

Warranty terms by product and available option

[MAP THIS FIELD]

An order records the selected warranty option, duration, start event, report window, covered issues, remedies, and any additional terms so the agreed coverage remains attached to that order.

6. Inspection, defects, and quality records

The customer inspects delivered items within the receiving window stated on the Sales Order. Defect reports identify the part, order, quantity affected, defect level, description, and requested remedy. Attach clear photographs and inspection evidence. Critical, major, and minor classifications guide review priority; the accepted order or quality disposition determines the remedy.

The supplier records inspection results and may request return, replacement, repair, or credit evidence before closing a claim. Warranty remedies are limited to the selected product-specific option and do not apply to damage caused by misuse, unauthorized modification, or normal wear unless the agreed option says otherwise.

Supplier invoices and any supporting quality or payment documents are attached to the relevant transaction in the portal. Each uploaded file remains a draft until reviewed and issued by authorized staff.

DEMO DATA NOTE	This sample uses fictional parties, product numbers, locations, specifications, prices, and warranty terms. Replace them with reviewed and approved commercial terms before any real use.

GENERAL TERMS AND SIGNATURES

Review the completed agreement and the referenced order schedules before issuing it to the customer portal.

7. Agreement period and changes

This agreement begins on its effective date and continues until its expiry date unless the parties extend or end it in writing. Ending this agreement does not cancel an accepted Sales Order, unpaid invoice, open quality claim, or warranty obligation already attached to an order. Amendments must identify the changed term and be accepted by authorized representatives of both parties.

8. Order of precedence and records

For a particular transaction, a mutually accepted written change controls only the term it expressly changes; otherwise, the accepted Sales Order controls item quantity, price, delivery schedule, order-level payment term, optional downpayment, and selected warranty. This framework controls the remaining general terms. Product specifications, blueprints, invoice proofs, shipment evidence, and quality photographs are retained with their related transaction records.

9. Electronic signature

After staff review, the agreement is issued to the customer portal. An authorized customer signatory may review the issued PDF and sign through the portal using the account’s recorded name. The portal stores the signed name, account, time, and signed document version. The parties should verify the exact PDF version before signing.

SIGNATURES

The signatures below acknowledge the reviewed version of this agreement and its schedules.
